Troubleshooting/FAQs

1. Connect the included USB 3.0/2.0 cable to the drive and the computer.

2. Connect the unit's AC adapter.

3. Turn the enclosure on.

4. Restart your computer. If your CAU3I came with a hard-disk pre-installed, your computer should detect the disk automatically. If you purchased your hard-disk and the CAU3I enclosure separately, please refer to the Assembly Guide online at: <http://www.cavalrystorage.com/manuals.aspx>

My Computer is not detecting the drive.

*Always check your disk management utility first; instead of device manager.

1. Make sure the USB cable is securely connected at both ends. If you are still not able to find the drive in your disk management utility, switch to a different known-working cable.

2. If you purchased your hard-disk and the CAU3I enclosure separately, your new disk will not be accessible until you initialize it. Please refer to the Initialization and Formatting Guide online at:

<http://www.cavalrystorage.com/manuals.aspx>

3. Some Cavalry drives are pre-formatted for either Windows or Mac. If you are running an operating system that your unit is not pre-configured for, you will need to reformat your drive. For detailed instructions on how to reformat, visit our website: <http://www.cavalrystorage.com/manuals.aspx>

4. If you have multiple external hard drives, your computer may not be able to see your newest addition. Eject and/or power-off all connected external drives except your Cavalry unit. Then, if you're using Windows, try assigning a new drive letter to your Cavalry unit using Disk Management.

My unit does not match the one shown in this guide.

This is a general guide for new users. Your product may vary from what is shown here.

My unit is making loud noises. Is this normal?

We apologize for the inconvenience. In most cases, loud noises coming from the drive suggest that it is defective. Please contact us at: customersupport@cavalrystorage.com, so that we can help resolve the issue quickly.

Do I need to backup my Cavalry drive too?

Always backup your data on multiple drives. Hard drives are very sensitive, and sometimes fail without warning. Cavalry Storage is not responsible for any data loss.

I keep getting the "Device Can Perform Faster" message.

This means that your computer does not support USB 3.0. You will need to purchase an adapter card that allows you to use the USB 3.0 protocol. Our authorized parts retailer sells an excellent card for just this purpose; please contact us at customersupport@cavalrystorage.com for more information.

How do I create a drive that can be used on both Mac and Windows?

You need to format a drive specifically with the FAT32 file system. This can most easily be done on a Mac, in Disk Utility. Just select the drive you want to use. Then select "Erase>MS Dos (Fat)> Erase..." Once created, this disk will be usable by both operating systems!
